ZULAFLY

ZulaFly means Savings.

Incorporating GPS into your day-to-day business provides critical knowledge of when your most valuable equipment is moving. ZulaFly takes this information one step further in a way no other system can. While there are companies that offer RTLS/RFID or GPS exclusively, ZulaFly is unique in that we offer one platform that does both. Consider this example: Fuzion alerts you when a vehicle is moving during off hours, while providing location information for people and equipment inside the facility and capital assets at a job site. A map replay for all GPS-tracked vehicles and assets allows you to 'push rewind' and know exactly where something has been and for how long. This information is invaluable in accident situations. Do unexpected pick-ups or drop-offs leave you scrambling to find someone who can help? With ZulaFly, you see in real-time who is closest... no phone calls needed! Your people and assets are too valuable to leave security to chance. The Fuzion platform adds peace of mind and efficiency to your business.

Security for What Moves.
