CHALLENGE:

UMC New Orleans was facing a critical challenge: ensuring the safety of its staff in an environment where workplace violence is a persistent concern. Despite maintaining a dedicated security team, the hospital recognized the need to bolster its emergency response capabilities to address this ongoing threat effectively. Additionally, UMC was looking for a single enterprise visibility solution that could be leveraged to improve workflow efficiencies.

SOLUTION:

UMC turned to ZulaFly for a comprehensive, cloud-based visibility solution. The platform connects and displays enterprise locating and panic alerting notifications. Additionally, ZulaFly can associate staff and asset tags to enable unique clinical workflows, and enables historical reporting of the full enterprise view of resources — both staff and equipment.

IMPLEMENTATION:

Approximately 2500 staff members at UMC received RTLS and safety badges as part of the system deployment. Additionally 5300 assets are tagged to help manage inventory and improve clinical workflow. To ensure proficiency in using the badges and the system as a whole, employees underwent training sessions facilitated by the ZulaFly team.

IMPACT:

The implementation of ZulaFly's System has yielded significant improvements in staff safety and workflow efficiency. Staff members feel safe and protected allowing them to focus on caring for patients. UMC has been expanding their visibility program, because ZulaFly can easily scale and integrate applications with no down time.

RESULTS:

- ZulaFly's has **transformed emergency response procedures, empowering staff members** with a proactive means of seeking assistance in threatening situations.
- The use of the staff locating and asset management has **eliminated equipment shrinkage and reduced dependency** on expensive equipment rentals.
